DETAILED ACTION

Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/31/05 has been entered.
- 2. Claims 1-3,5-8,10-18 are currently pending. Claims 4,9,19,20 have been canceled.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 10 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 10 now depends from canceled claim 9.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-3,5-8,10-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rudd '676 in view of Murphy

Rudd '676 discloses a torque controller 34 which comprises an input, <u>for receiving</u> a command torque, as broadly claimed, an input <u>for receiving</u> a signal indicative of a measured amount of brake torque applied to the wheel and an output for providing a brake pressure output command to a brake actuator. Please see the discussion in columns 4-7 and note equation 6.

Rudd however lacks a specific discussion of adjusting the brake pressure output command Pc to provide improved brake response during normal braking.

The reference to Murphy discloses a torque feedback controller, which has inputs for receiving command and measured brake torques, and that allows torque compensation operation until the wheel speed reaches zero that avoids discontinuities in braking regardless of time or torque level. Please refer to col. 6 of Murphy. This reference is similar to the prior art discussed on page 1 of applicants specification.

Murphy also discloses an alternative embodiment in figure 3 and discussed on col. 8

One having ordinary skill in the art at the time of the invention would have found it obvious to have modified the reference to Rudd to incorporate the teachings of Murphy to offer smoother brake system and to avoid the discontinuities in braking (such as grabby brakes) discussed by Murphy.

The limitations of claims 2-20 are either suggested by the combined teachings of Rudd and Murphy or are notoriously well known in the art. For instance, although not applied, note the look up tables suggested by Littlejohn or Amberg et al. '113.

Application/Control Number: 10/613,057 Page 4

Art Unit: 3683

Response to Arguments

6. Applicant's arguments with respect to claims 1-20 have been considered but they are not persuasive. With regard to applicant's added limitations to the pressure sensor, please see the embodiment of figure 3 of Murphy as discussed in col. 8.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher P. Schwartz whose telephone number is 571-272-7123. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Bucci can be reached on 571-272-7099. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
